PREFACE AND ACKNOWLEDGMENTS

This report presents data from the Annual Housing Survey, which was sponsored by the U.S. Department of Housing and Urban Development and conducted by the U.S. Bureau of the Census. It was developed under the direction of Arnold H. Diamond, Special Assistant to the Deputy Assistant Secretary for Economic Affairs, Department of Housing and Urban Development; and Arthur F. Young, Chief, Housing Division, Bureau of the Census.

Arnold H. Diamond, Duane McGough, and David Yentis were responsible for overseeing the Annual Housing Survey and the resultant report on behalf of the Department of Housing and Urban Development.

Within the Bureau of the Census, this report was developed in the Housing Division. It was prepared under the supervision of Leonard J. Norry, Assistant Division Chief, by Elmo E. Beach, Chief, Current Surveys Branch, assisted by Aneda E. France, Edward D. Montfort, and George Spraggins. Specific activities related to data collection procedures, statistical presentation, organization of the report, and preparation of text materials were performed by Edward Cary Bean Jr., Robert W. Bonnette, Mary C. Carroll, Margaret W. Harper, Paul P. Harple, Jr., Patricia A. Holloway, Richard G. Knapp, Mary A. Knoll, Richard G. Kreinsen, Jane S. Maynard, Marjorie Shelton, Janet A. Tippett, and Jeanne M. Woodward. Important contributions were made by Aaron Josowitz, Nathan Krevor, and Herbert Shapiro in the planning and coordination of the survey.

The operational aspects of the Annual Housing Survey were coordinated by the

Demographic Surveys Division under the direction of Earle J. Gerson, Chief, by Stanley Greene, Assistant Division Chief, and Edward F. Knowles, assisted by John C. Cannon and Joan F. Garrett. Systems and processing procedures were performed under the direction of Barry M. Cohen, Assistant Division Chief. The computer programming and processing were performed under the supervision of D. Richard Bartlett, assisted by Merritt Woodard, Margaret Goldsworth, Robert St. Laurent, and Lee Rian. Leonard Goldberg, assisted by David B. Lipscomb and Robert Smith, Jr., was responsible for the clerical and keying procedures.

The planning of sample design, weighting, and computation of sampling variances were developed in the Statistical Methods Division under the supervision of Morton Boisen, Charles Jones, and Gary Shapiro, by David Bateman, Dennis Schwanz, and Mason Malmuth. The implementation of the sample selection was performed under the supervision of David Diskin and Leonard Baer, by Jerome Roth and Patricia Clark (Data Preparation Division, Jeffersonville, Indiana). The standard errors were computed under the supervision of David Diskin, by Robert Aquilino and Robert Jewett. Implementation of field sample control and reinterview procedures was carried out under the supervision of Irene C. Montie, by Fay F. Nash and John J. Paletta. Reinterview design and analysis was conducted under the supervision of Irwin Schreiner.

Data collection activities were administered by the Field Division under the supervision of Richard C. Burt, Chief; by Stanley D. Matchett, Assistant Division

Chief; Dean C. Schroeder, and Kenneth A. Frail as well as the directors of the Bureau's regional offices.

Clerical processing of the questionnaires was performed in the Data Preparation Division under the direction of O. Bryant Benton, Chief, by Don L. Adams and Harry Myers.

Within the Publications Services Division, many individuals made significant contributions in the areas of publication planning and design, editorial review, composition, and printing procurement.

GENERAL

This report presents final detailed cross-tabulations on the housing characteristics of units occupied by "recent movers" from the 1974 Annual Housing Survey. Statistics are presented for the United States by inside and outside standard metropolitan statistical areas (SMSA's) and each of the four geographic regions. Households that moved into their units during the 12 months prior to enumeration are classified as recent movers. Characteristics of the present units of recent movers are cross-tabulated by characteristics of the previous units. In contrast to advance report part D, this report presents final statistics from the 1974 survey.

The Annual Housing Survey was designed to provide a current series of information on the size and composition of the housing inventory, the characteristics of its occupants, the changes in the inventory resulting from new construction and from losses, indicators of housing and neighborhood quality, and the characteristics of recent movers. The survey, performed for the Department of Housing and Urban Development, is authorized under sections 501 and 502(d), 502(e), and 502(f) of the Housing and Urban Development Act of 1970, Title 12, United States Code 1701z-1 and 1701z-2. The Bureau of the Census is authorized under Title 31, United States Code 686, to perform special work or services for Federal agencies.

The statistics presented in this report are based on information from a sample of housing units. The information for the survey was collected by personal interview from August to October 1974.

This report series consists of six parts (see list on page III) issued jointly by the Department of Housing and Urban Development and the Bureau of the Census. Part A provides data on general housing characteristics, part B on indicators of housing and neighborhood quality, part C on financial characteristics, part D on recent mover households, part E on urban and rural housing characteristics, and part F on financial

characteristics cross-classified by indicators of housing and neighborhood quality. Part E is being published for the first time as part of the 1974 final reports publication program. Part F was first published as part of the 1973 publication program as Series H-151-73, report No. 1.

The content and procedures of the Annual Housing Survey were determined after consultation with a variety of users of housing data and through field pretesting. A large portion of the subjects covered in this report are the same as those shown in the 1970 Census of Housing; in general, these data are comparable to those shown in the 1970 census reports. In addition, a number of new items were introduced in this survey on such subjects as distance and travel time from home to work for the household head, storm windows and doors, insulation, breakdowns or failures in equipment, the physical condition of the structure, and neighborhood conditions and services.

More detailed information on the technical and procedural matters covered in the text of this report can be obtained by writing to the Director, Bureau of the Census, Washington, D.C. 20233.

Organization of the text.—The text consists of this introduction and appendixes A and B, which appear after the data tables. Appendix A describes the geographic area classifications and provides definitions and explanations of the subjects covered in this report. Appendix B presents information on sample design, estimation, and accuracy of the data.

Content of the tables.—A series of standard tables presents cross-tabulations of the data for occupied housing units for each area shown in this report. The finding guide on the inside back cover lists the characteristics covered in this report and shows the tables in which the various types of statistics appear. The numbers presented in these tables are rounded to the nearest

INTRODUCTION—Continued

thousand. Table 1 presents characteristics of all occupied housing units and units occupied by recent movers (households that moved into their units during the 12 months prior to enumeration). Tables 2 to 9 present characteristics of the present unit for recent mover households cross-tabulated by characteristics of the previous unit. The same subject content as shown in tables 1 to 9 is presented for housing units with Negro head of household in tables 10 to 18 and for housing units with household head of Spanish origin in tables 19 to 27.

The prefix letter "A" has been assigned to the tables for the United States as a whole, "B" to the Northeast region, "C" to the North Central region, "D" to the South region, and "E" to the West region.

Sample size.—The statistics presented in this report are based on a sample of housing units and are, therefore, subject to sampling variability. The designated sample consisted of approximately 78,000 housing units located throughout the United States. The sample was selected from units enumerated in the 1970 census and updated to include units constructed since 1970. Detailed information on the sample design, size of sample, estimation procedure, and sampling variability associated with these data is given in appendix B.

Derived figures (medians, etc.).—Shown in this report are medians and ratios. The median, which is a type of average, is the middle value in a distribution; i.e., the median divides the distribution into two equal parts—one-half the cases fall below the median and one-half the cases exceed the median. Derived figures are not presented (but indicated by three dots "...") if there are less than 25 sample cases in the distribution or the base.

Medians for rooms and persons are rounded to the nearest tenth, for value and income to the nearest hundred dollars, and for rent to the nearest dollar. In computing medians for rooms and persons per housing unit, the whole number is used as the midpoint of the interval so that, for example, the category "4 rooms" is treated as an interval ranging from 3.5 up to 4.5 rooms. In computing median rent, units reported as "no cash rent" are excluded. The medians are generally computed on the basis of the distributions as shown in this report.

When the median falls in the lower terminal category of an open-end distribution, the method of presentation is to show the initial value of the next category followed by a minus sign; thus, for example, if the median falls in the category "Less than \$10,000," it is shown as "\$10,000—." When the median falls in the upper terminal category of an open-end distribution, the method of presentation is to show the initial value of the terminal category followed by a plus sign; thus, for example, if the median falls in the category "\$35,000 or more," it is shown as "\$35,000+."

Symbols.—A dash “—” signifies zero. Three dots “...” in a data column mean not applicable or that the base for a derived figure

is too small for it to be shown. The symbol "NA" means not available.

Boundaries.—The data shown in this report relate to the areas as defined for the 1970 census. See appendix A for a discussion of these areas. Additional information and definitions of the 1970 boundaries are given in the 1970 Population Census PC(1)-A reports.

Other reports from the Annual Housing Survey.—In addition to the six basic reports in the Annual Housing Survey Series H-150, one or more supplementary reports (Series H-151) may be published for the United States. Also, as part of the 1974 H-150 series, four advance reports containing preliminary data from the 1974 survey were published for parts A through D; these reports will be superseded by the publication of final reports A through D. A series of reports (H-170) similar to H-150 will also be published for 60 selected standard metropolitan statistical areas. The data for the SMSA's are based on an independent sample of the 60 SMSA's divided into 3 groups of approximately 20 each, with 1 group interviewed every 3 years on a rotating basis. Enumeration for the first group began on April 1, 1974, and continued through March 1975; enumeration for the second group began on April 1, 1975, and continued through March 1976. Publication for the first group of SMSA reports is scheduled for the summer of 1976. Below is a list of the SMSA's in each group:

INTRODUCTION—Continued

DATA COLLECTION PROCEDURES

The 1974 Annual Housing Survey was conducted by enumerators who made personal visits to each sample unit and obtained the information from the occupants or, if the unit was vacant, from informed persons (landlords, rental agents, or knowledgeable neighbors). The information reported by the enumerator reflected the situation at the time of enumeration, which began in August and extended through October 1974.

Data were collected for sample housing units located in the counties and independent cities comprising the 461 sample areas used in current surveys of the Census Bureau. A sample of housing units was selected in these areas from the 1970 census and updated by a sample of addresses from building permits to include housing units added since 1970. Estimates of the counts and characteristics of the 1974 inventory were obtained for these sample units.

For the estimates of losses from the 1973 housing inventory, the interviewer located the 1973 sample unit. If the 1973 sample unit no longer existed or no longer was a separate housing unit, the disposition of the unit was determined; i.e., lost through means such as demolition, disaster, merger, or conversion to nonresidential use.

A more detailed description of the survey design and sampling procedures can be found in appendix B.

PROCESSING PROCEDURES

The questionnaires used for the 1974 Annual Housing Survey were of the conventional type, on which the enumerator recorded the information by marking a pre-coded check box or by writing in the entries. Census clerks edited and coded the schedules. The information from the questionnaires was data-keyed directly to magnetic tape which was processed on the Census Bureau's computers through a number of editing and tabulating steps. A facsimile of the questionnaire appears in appendix A.

The 1973 characteristics of units lost from the housing inventory were obtained by matching those units to the 1973 Annual Housing Survey records. The 1973 data for the losses were then extracted from the 1973 Annual Housing Survey record tapes.

QUALIFICATIONS OF THE DATA

Since the estimates in this report are based on a sample, they may differ somewhat from the figures that would have been obtained from a complete census, using the same schedules,

instructions, and enumerators. Particular care should be exercised, therefore, in the interpretation of figures based on relatively small numbers of sample cases as well as small differences between figures. As in any survey work, the results are subject to errors of response and nonreporting and to sampling variability. For a further discussion of accuracy of the data, see appendix B.

In making comparisons with 1970 data, differences in the data may reflect such factors as the use of direct interview for 1974 contrasted with the extensive use of self-enumeration in 1970, the sample design, the estimation procedure used, the sampling variability of the estimates, and the processing procedures. See the section on "Comparability with 1970 Census of Housing data" in appendix A for further discussion.

In addition, according to the 1970 Census Evaluation and Research Program, the 1970 count of 68.7 million housing units is understated by approximately 1.5 million units which were missed in the 1970 census. See the section on "Estimates of Change in the Inventory" in the Summary of Findings, Series H-150-73A, General Housing Characteristics, and Series PHC(E)-5, The Coverage of Housing in the 1970 Census, for further discussion.

Although the amounts for both value and rent are given in current rather than in constant dollars, and thus are subject to some inflationary influence, a comparison between previous and present residences is considered feasible because the time interval involved is confined to a 12-month period.

The concepts and definitions of most of the items in this report are essentially the same as those used for the 1970 census. The SMSA boundaries are the same as those in the 1970 census. For historical comparisons and boundary changes, refer to the census reports of 1960 and earlier.

In this report, statistics on income relate to the income of the family or primary individual. Therefore, no data are provided on household income; i.e., income of persons unrelated to the head of the household is excluded.

Statistics for some of the characteristics shown in this report are based on restricted universes and, therefore, care should be exercised in relating the statistics for one characteristic to another. For example, the characteristics shown for present and previous units occupied by recent movers are largely restricted to households with the same head in both the present and previous units. Therefore, the totals for owner-occupied units in the "same head in present and previous unit" universe do not agree with the totals for owner-occupied units for some of the other universes such as "rooms" or "persons."

See appendix A for a more detailed discussion of the definitions and qualifications of all items in this report.

TABLE A-1. UNITED STATES-SELECTED CHARACTERISTICS OF ALL OCCUPIED HOUSING UNITS AND OF UNITS OCCUPIED BY RECENT MOVERS, BY TENURE: 1974

(NUMBERS IN THOUSANDS. DATA BASED ON SAMPLE, SEE TEXT. FOR MINIMUM BASE FOR DERIVED FIGURES (PERCENT, MEDIAN, ETC.) AND MEANING OF SYMBOLS, SEE TEXT)

FACSIMILE OF THE ANNUAL HOUSING SURVEY QUESTIONNAIRE: 1974 App-8

AREA CLASSIFICATIONS

Counties

The primary divisions of most of the States are termed counties; in Louisiana the corresponding units are termed parishes. Alaska has no counties; in this State, areas designated census divisions have been defined for general statistical purposes by the State in cooperation with the Census Bureau and are treated as county equivalents. Four States (Maryland, Missouri, Nevada, and Virginia) contain one or more cities that are independent of any county; for statistical purposes these independent cities are treated as county equivalents.

Standard Metropolitan Statistical Areas

The definitions of standard metropolitan statistical areas used in the Annual Housing Survey correspond to the 243 SMSA's used in the 1970 census. These include the 228 SMSA's as defined and named in the Bureau of the Budget publication, **Standard Metropolitan Statistical Areas: 1967**, U.S. Government Printing Office, Washington, D.C. 20402. After 1967, 15 SMSA's were added, of which 2 were defined in January 1968 and an additional 13 were defined in February 1971 on the basis of the results of the 1970 census. Changes in SMSA definition cri-

teria, boundaries, and titles made after February 1971 are not reflected in this series of reports. SMSA's are defined by the Office of Management and Budget (formerly Bureau of the Budget).

Except in the New England States, a standard metropolitan statistical area is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000. In addition to the county or counties containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are socially and economically integrated with the central city. In the New England States, SMSA's consist of towns and cities instead of counties. Each SMSA must include at least one central city, and the complete title of an SMSA identifies the central city or cities. For a detailed description of the criteria used in defining SMSA's, see the Bureau of the Budget publication cited above.

In this report, figures for "in central cities" refer to all housing units within the legal city boundaries. For a few central cities, the figures include some housing units in parts of the city classified as rural in the 1970 census.

DEFINITIONS AND EXPLANATIONS OF SUBJECT CHARACTERISTICS

General

As stated in the introductory text of this report, the 1974 Annual Housing Survey was conducted by direct interview. The survey enumerators were instructed to read the questions directly from the questionnaire. The definitions and explanations given below for each subject are to a considerable extent drawn from various technical and procedural materials used in the collection of the data. This material helped the enumerative personnel to understand more fully the intent of each question and thus to resolve problem or unusual cases. Additional explanatory information has been

APPENDIX A—Continued

added to this portion of the text to assist the user in the proper utilization of the statistics.

Comparability with 1973 Annual Housing Survey.—The concepts and definitions are essentially the same for items that appear in both the 1974 reports and the 1973 reports. Because of the relatively small sample size, particular care should be taken in making year-to-year comparisons, especially where there are small differences between the figures.

Comparability with 1970 Census of Housing data.—The concepts and definitions used in the 1970 census are generally comparable for items that appear in both the 1970 census and the 1974 survey. The major difference, however, is the time period classifying "recent movers." In the Annual Housing Survey, recent movers are households that moved into their units during the 12 months prior to enumeration, a time period of 1 year or less. In the 1970 Census of Housing reports, different time periods were used. In Volume II, **Metropolitan Housing Characteristics**, the shortest time period for "year moved into unit," is "1969 to March 1970" (1½ years); in Volume IV, **Components of Inventory Change**, the period is 1969 to December 1970 (approximately 2 years); and in Volume VII, No. 5, **Mover Households**, the time period is April 1965 to March 1970 (approximately 5 years). Volume IV is the only 1970 census report which shows cross-tabulations of data on characteristics of present units by characteristics of previous units for recent movers. Other definitional differences, if any, are discussed under the particular subject later in this section.

Additional differences between the 1974 Annual Housing Survey data and the 1970 census data may be attributed to several factors. These include the extensive use of self-enumeration in the census in contrast to direct interview in the Annual Housing Survey; differences in processing procedures; the estimation procedures and sample designs; the sampling variability of the estimates from the Annual Housing Survey; to a smaller

extent, the sampling variability associated with the sample data from the census; the nonsampling errors associated with the Annual Housing Survey estimates; and the nonsampling errors associated with the census estimates.

Comparability with Current Population Survey.—The Current Population Survey (CPS) is a monthly sample survey of approximately 58,000 designated sample units. From the data collected in the Current Population Survey, the Census Bureau issues several publications under the general title Current Population Reports. Included are reports on household and family characteristics, mobility of the population, and income.

The concepts and definitions used in this report are essentially the same as those used in the Current Population Reports. However, there is a major difference in the concept of "mover." In this report, household heads that moved into their units during the 12 months prior to enumeration are classified as "recent movers." In the Current Population Reports, individuals whose current place of residence is different than in March 1970 are classified as "movers."

There are also likely to be significant differences between the income data shown in this report and the income data shown in the Current Population Reports. The time period covering income is different in that in this report income covers the 12 months prior to the date of enumeration while the income data in the Current Population Reports refer to the calendar year prior to the date of enumeration. There are also significant differences in the way income questions are asked. Additional differences between the 1974 Annual Housing Survey and the Current Population Survey may be attributed to factors such as the sampling variability and nonsampling errors of the figures from the two surveys, survey procedures and techniques, and processing procedures.

Living Quarters

Living quarters are classified as either housing units or group quarters. Usually,

living quarters are in structures intended for residential use (e.g., a one-family home, apartment house, hotel or motel, boarding house, or mobile home or trailer). Living quarters may also be in structures intended for nonresidential use (e.g., the rooms in a warehouse where a watchman lives), as well as in places such as tents, caves, and old railroad cars.

Housing units.—A housing unit is a house, an apartment, a group of rooms, or a single room occupied or intended for occupancy as separate living quarters. Separate living quarters are those in which the occupants do not live and eat with any other persons in the structure and which have either (1) direct access from the outside of the building or through a common hall which is used by the occupants of another unit or by the general public or (2) complete kitchen facilities for the exclusive use of the occupants. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated persons who share living arrangements (except as described in the section on group quarters). For vacant units, the criteria of separateness, direct access, and complete kitchen facilities for exclusive use are applied to the intended occupants whenever possible. If the information cannot be obtained, the criteria are applied to the previous occupants. Both occupied and vacant housing units are included in the housing inventory, except that mobile homes, trailers, tents, caves, boats, railroad cars, and the like, are included only if they are occupied.

Group quarters.—Group quarters are living arrangements for institutional inmates or for other groups containing five or more persons not related to the person in charge. Group quarters are located most frequently in institutions, boarding houses, military barracks, college dormitories, fraternity and sorority houses, hospitals, monasteries, convents, and ships. A house or apartment is considered group quarters if it is shared by the person in charge and five or more persons

unrelated to him, or if there is no person in charge, by six or more unrelated persons. Information on the housing characteristics of group quarters was not collected.

Rules for mobile homes, hotels, rooming houses, etc.—Mobile homes or trailers, tents, boats, or railroad cars are not considered housing units if vacant, used only for business, or used only for vacations.

Occupied rooms or suites of rooms in hotels, motels, and similar places are classified as housing units only when occupied by permanent residents; i.e., persons who consider the hotel as their usual place of residence or have no usual place of residence elsewhere. Vacant rooms or suites of rooms are classified as housing units only in those hotels, motels, and similar places in which 75 percent or more of the accommodations are occupied by permanent residents.

If any of the occupants in a rooming or boarding house live and eat separately from everyone else in the building and have either direct access or complete kitchen facilities for exclusive use, their quarters are classified as separate housing units. The remaining quarters are combined. If the combined quarters contain four or fewer roomers unrelated to the head, they are classified as one housing unit; if the combined quarters contain five or more roomers unrelated to the head or person in charge, they are classified as group quarters. In a dormitory, residence hall, or similar place, living quarters of the supervisory staff and other employees are separate housing units if they satisfy the housing unit criteria; other living quarters are considered group quarters.

Institutions.—Living quarters of staff personnel are separate housing units if they satisfy the housing unit criteria. Other living quarters are considered group quarters.

Occupancy Characteristics

Occupied housing units.—A housing unit is classified as occupied if a person or group of persons is living in it at the time

of enumeration or if the occupants are only temporarily absent—for example, on vacation. However, if the unit was occupied entirely by persons with a usual place of residence elsewhere, the unit is classified as vacant. By definition, the count of occupied housing units is the same as the count of households.

Race.—The classification by race shown here refers to the race of the head of the household occupying the housing unit. The concept of race as used by the Census Bureau does not denote clear-cut scientific definitions of biological stock. The classification of race in the 1974 Annual Housing Survey was made by the enumerator based on his own observation. In the 1970 census, race was essentially a self-classification by people according to the race with which they identified themselves. Detailed characteristics of units with Negro head of household are presented in separate tables.

Spanish origin.—The classification by Spanish origin here refers to the origin of the head of the household occupying the housing unit. Detailed characteristics of units with head of Spanish origin are presented in separate tables. Spanish origin was determined on the basis of a question that asked for self-identification of a person's origin or descent. Respondents were asked to select their origins from a "flash card." Persons of Spanish origin were those who indicated that their origin was either Mexican-American, Chicano, Mexican, Mexicano, Puerto Rican, Cuban, Central or South American, or other Spanish.

In the 1970 census and current surveys' reports, Spanish persons are identified according to various criteria: Birthplace, birthplace of parents, language, surname, and origin or descent. For this reason, care should be taken in making comparisons of Spanish origin estimates from the Annual Housing Survey and other surveys.

Tenure.—A housing unit is "owner occupied" if the owner or co-owner lives in the unit, even if it is mortgaged or not

fully paid for. A cooperative or condominium unit is "owner occupied" only if the owner or co-owner lives in it. All other occupied units are classified as "renter occupied," including units rented for cash rent and those occupied without payment of cash rent.

Year head moved into unit.—Data on year moved into unit are based on the information reported for the head of the household. The question refers to the year of latest move. Thus, if the head moved back into a unit he had previously occupied, the year of his latest move was to be reported; if he moved from one apartment to another in the same building, the year he moved into his present unit was to be reported. The intent is to establish the year the present occupancy by the head began. The year the head moves is not necessarily the same year other members of the household move, although in the great majority of cases the entire household moves at the same time.

Units Occupied by Recent Movers

Recent movers.—Households that moved into their present units within 12 months prior to the date of enumeration are termed "recent movers." The household is classified by year moved into unit on the basis of information reported for the head of the household.

Present and previous units of recent movers.—The "present" unit is the unit occupied by the recent mover at the time of enumeration. The previous unit is the unit from which he moved. If the household moved more than once during the 12 months prior to the date of enumeration, the previous unit is the one from which the household last moved.

Same or different head.—Characteristics of the present and previous units occupied by recent movers are largely restricted to households that were essentially the same in the two units. The definitions of the characteristics for the previous unit are generally the same as those for the present unit.

APPENDIX A—Continued

A household for which the head in the present unit is the same person as the head in the previous unit (identified in the tables as "same head") is considered essentially the same even though there may have been some changes in the composition of the household. Conversely, a household in which there was no change except for a new household head was considered a household with "different head."

Main reason for move into present unit.—The statistics presented are restricted to units occupied by recent movers in which the present head of household was also the head at the previous unit he occupied. The classification categories refer to the principal reason the head of the household moved into his present unit. The category "job related reasons" refers to reasons such as job transfer, new job, retirement, and commuting reasons. The category "family status" refers to reasons such as newly married, family increased in size, and moved to be closer to relatives. The category "housing needs" refers to reasons such as wanted to own his own residence, wanted a less expensive house, and didn't like his old neighborhood. The category "other reasons" includes reasons for moving which do not fall into any of the above classifications.

Utilization and Structural Characteristics

Persons.—All persons occupying the housing unit are counted. These persons include not only occupants related to the head of the household but also any lodgers, roomers, boarders, partners, wards, foster children, and resident employees who share the living quarters of the household head. The data on "persons" show the number of housing units occupied by the specified number of persons.

A person is enumerated at his usual place of residence. This refers to the place where the person lives and sleeps most of the time. This place is not necessarily the same as his legal residence, voting residence, or domicile.

Rooms.—The statistics on "rooms" are in terms of the number of housing units

with specified number of rooms. Rooms counted include whole rooms used for living purposes such as living rooms, dining rooms, bedrooms, kitchens, finished attic or basement rooms, recreation rooms, permanently enclosed porches that are suitable for year-round use, and lodgers' rooms. Also included are rooms used for offices by a person living in the unit.

A partially divided room, such as a dinette next to a kitchen or living room, is a separate room only if there is a partition from floor to ceiling, but not if the partition consists only of shelves or cabinets.

Not included in the count of rooms are bathrooms, halls, foyers or vestibules, balconies, closets, alcoves, pantries, strip or pullman kitchens, laundry or furnace rooms, unfinished attics or basements, other unfinished space used for storage, open porches, trailers used only as bedrooms, and offices used only by persons not living in the unit.

If a room is used by occupants of more than one unit, the room is included with the unit from which it is most easily reached.

Persons per room.—"Persons per room" is computed for each occupied unit by dividing the number of persons in the unit by the number of rooms in the unit. The figures shown refer, therefore, to the number of housing units having the specified ratio of persons per room.

Bedrooms.—The number of bedrooms in the unit is the count of rooms used mainly for sleeping, even if also used for other purposes. Rooms reserved for sleeping such as guest rooms, even though used infrequently, are counted as bedrooms. On the other hand, rooms used mainly for other purposes, even though used also for sleeping, such as a living room with a hideaway bed, are not considered bedrooms. A housing unit consisting of only one room, such as one-room efficiency apartment, is classified, by definition, as having no bedroom.

Basement.—Statistics on basements are presented in terms of the number of housing units located in structures built

with a basement. A structure has a basement if there is enclosed space in which persons can walk upright under all or part of the building.

Year structure built.—Year structure built refers to when the building was first constructed, not when it was remodeled, added to, or converted. The figures relate to the number of units in structures built during the specified periods and in existence at the time of enumeration. For mobile homes and trailers, the model year was assumed to be the year built.

Units in structure.—In the determination of the number of units in a structure, all housing units, both occupied and vacant, were counted. The statistics are presented in terms of the number of housing units in structures of specified type and size, not in terms of the number of residential structures. A structure is a separate building that either has open space on all sides or is separated from other structures by dividing walls that extend from ground to roof.

When one or more rooms have been added to a mobile home or trailer it is classified as a one-family house. If, however, only a porch or shed has been added, it is still counted as a mobile home or trailer. In tables 1, 10, and 19, mobile homes and trailers are shown as a separate category; in tables 3, 12, and 21, they are included in the "1 unit" category.

Parking facilities.—The statistics on parking facilities presented in this report are restricted to renter-occupied units for which cash rent is paid and exclude one-family homes on 10 acres or more. The data refer to off-street parking facilities which are available in connection with the building. The facilities are provided by the landlord or management and must be available without an additional cost to the renter. The parking facility may be a garage, carport, driveway, or open lot where the occupant may park his car off the street.

Plumbing Characteristics and Equipment

Plumbing facilities.—The category "with all plumbing facilities" consists of units

which have hot and cold piped water inside the structure as well as a flush toilet and a bathtub or shower inside the structure for the exclusive use of the occupants of the unit. All plumbing facilities must be located in the structure but they need not be in the same room. "Lacking some or all plumbing facilities" means that the unit does not have all three specified plumbing facilities (hot and cold piped water, as well as flush toilet and bathtub or shower inside the structure), or that the toilet or bathing facilities are also for the use of the occupants of other housing units.

Complete bathrooms.—In this report, counts are shown only for occupied housing units which have more than one complete bathroom; i.e., one complete bathroom plus half bath as well as those with two bathrooms or more. A housing unit is classified as having a complete bathroom if it has a room with a flush toilet and bathtub or shower and a wash basin, as well as piped hot water in the structure for the exclusive use of the occupants of the unit. A half bathroom has either a flush toilet or a bathtub or shower for exclusive use, but does not have all the facilities for a complete bathroom.

Sewage disposal.—In this report, counts are shown only for occupied housing units with a public sewer. A public sewer is connected to a city, county, sanitary district, neighborhood, or subdivision sewer system. It may be operated by a governmental body or private organization. Small sewage treatment plants which in some localities are called neighborhood septic tanks are classified as public sewers. Not included in the category "with public sewer" are septic tanks, cesspools, chemical toilets, privies, and other means of sewage disposal.

Air conditioning.—Air conditioning is defined as the cooling of air by a refrigeration unit; excluded are evaporative coolers, fans, or blowers which are not connected to a refrigeration unit. A room unit is an individual air conditioner which

is installed in a window or an outside wall and is generally intended to cool one room, although it may sometimes be used to cool more than one room. A central system is a central installation which air conditions the entire housing unit. In an apartment building, a central system may cool all apartments in the building, each apartment may have its own central system, or there may be several systems, each providing central air conditioning for a group of apartments. A central installation with individual room controls is a central air-conditioning system.

Automobiles and trucks available.—Statistics on automobiles available represent the number of passenger automobiles, including station wagons, which are owned or regularly used by any member of the household and which are ordinarily kept at home. The figures include leased automobiles, taxicabs, and company-owned automobiles kept at home. Police cars, pickups, or larger trucks were not to be counted. In the 1973 Annual Housing Survey, taxicabs kept at home were not included in the count of "automobiles available."

The data on trucks available represent the number of pickups and small panel trucks of one-ton capacity or less which are owned or regularly used by any member of the household and which are ordinarily kept at home. Trucks used for business purposes were included only if also used for personal activities of household members.

The statistics do not reflect the number of privately owned automobiles or trucks or the number of households owning such vehicles.

Garbage and trash collection service.—The statistics on garbage and trash collection service presented in this report are restricted to renter-occupied units for which cash rent is paid and exclude one-family homes on 10 acres or more. The data refer to whether or not the cost of garbage and trash collection service is paid by the renter. The service may be public or private. If the garbage (food waste) is collected by one company and

the trash (paper, cans, etc.) by another, the data refer to the garbage collection service.

Financial Characteristics

Value.—Value is the respondent's estimate of how much the property (house and lot) would sell for if it were for sale. The statistics on value are shown only for one-family homes on less than 10 acres without a commercial establishment or medical or dental office on the property. Owner-occupied cooperatives, condominiums, mobile homes, and trailers are excluded from the value tabulations.

Median value is shown separately for housing units with garage or carport on property. The garage or carport must be currently available for use by the occupants of the unit; i.e., the members of the household can use it for parking even if it is currently used as a storage area for items such as lawn equipment or furniture. It may be attached to the house or it may be completely unattached, but it must be on the property. Excluded are garages or carports that have been converted to other uses such as living quarters, an extra room for business purposes, rented to someone else, or for some reason cannot be used for parking.

Gross rent.—The computed rent termed "gross rent" is the contract rent plus the estimated average monthly cost of utilities (electricity, gas, water) and fuels (oil, coal, kerosene, wood, etc.), if these items are paid for by the renter (or paid for him by someone else, such as a relative, welfare agency, or friend) in addition to rent. Contract rent is the monthly rent agreed to, or contracted for, regardless of any furnishings, utilities, or services that may be included. Thus, gross rent is intended to eliminate differentials which result from varying practices with respect to the inclusion of utilities and fuel as part of the rental payment. The estimated costs of water and fuels are reported on a yearly basis but they are converted to monthly figures in the computation process.

The statistics on rent exclude one-family houses on 10 acres or more. Rent-

APPENDIX A—Continued

er units occupied without payment of cash rent are shown separately as "no cash rent" in the rent tabulations.

Mortgage on property.—Statistics are presented on the number of owner-occupied housing units with a mortgage or similar debt and whether the mortgage or similar debt is insured. The data are restricted to one-family homes on less than 10 acres without a commercial establishment or medical or dental office on the property. "Mortgage or similar debt" refers to all forms of debt where the property is pledged as security for repayment of the debt by the head of household or other household members. Included are such debt instruments as mortgages, deeds of trust, mortgage bonds, vendors' liens, and contracts to purchase.

The Federal Housing Administration insures loans on homes. The Veterans Administration guarantees or insures loans under the Serviceman's Readjustment Act (G.I. Bill). The Farmers' Home Administration provides much the same service as the Federal Housing Administration, but confines its assistance to rural areas. Private mortgage insurance companies insure loans that are not insured or guaranteed by an agency of the Federal government. It should be noted that many conventional loans are not insured or guaranteed at all.

Public or subsidized housing.—A housing unit is classified as being in a "public housing project" if the structure in which the unit is located is owned by a local housing authority or other public agency, such as a housing and redevelopment authority or a housing development agency, and operated as public housing. These organizations may receive subsidies from the Federal or State government but the local agency owns the property. All other housing units are classified as "private housing."

Private housing units are further classified by whether the unit is subsidized; that is, the respondent pays a lower rent because a Federal, State, or local government program pays part of the cost of construction, building mortgage, or oper-

ating expenses. These programs include (1) the interest subsidy programs of the Department of Housing and Urban Development (HUD) for rental and cooperative housing for moderate-income families, (2) the rent supplement program where part of the rent for low-income families occupying certain types of rental housing projects is paid by HUD, and (3) the direct loan program of HUD for housing the elderly.

The statistics on public or subsidized housing exclude one-family homes on 10 acres or more and renter units occupied without payment of cash rent. In addition, the data are not based on government or local records; the figures are, therefore, subject to the ability of a respondent to properly classify his unit as public or private and, if private, as subsidized or nonsubsidized housing.

Household Characteristics

Household.—A household consists of all the persons who occupy a housing unit. By definition, the count of households is the same as the count of occupied housing units.

Head of household.—One person in each household is designated as the "head"; that is, the person who is regarded as the head by the members of the household. However, if a married woman living with her husband is reported as the head, her husband was considered the head for the purpose of simplifying the tabulations.

Household composition.—Statistics by age of head are presented separately for two-or-more-person households and for one-person households. Households having two or more persons are further subdivided as follows:

Male head, wife present, no nonrelatives.—Each household in this group consists of the head and his wife, and other persons, if any, all of whom are related to him.

Other male head.—This category includes households with male head, wife present, with nonrelatives living

with them; male heads who are married, but with wife absent because of separation or other reason where husband and wife maintain separate residences; and male heads who are widowed, divorced, or single.

Female head.—This group comprises households with female heads regardless of their marital status. Included are female heads with no spouse and female heads whose husbands are living away from their families, for example, husbands in the Armed Forces living on military installations.

Households consisting of only one person are shown separately as "one-person households" and are not included in the subcategories "other male head" and "female head."

Family or primary individual.—Housing units are occupied by either "families" or "primary individuals." The term "family" refers to the head of a household and all (one or more) other persons living in the same household who are related to the head by blood, marriage, or adoption. If the head lives alone or with nonrelatives only, then the head is considered a "primary individual."

Married couples related to the head of a family are included in the family and are not considered as separate families. A lodger, servant, or other person unrelated to the head is considered a member of the household but not of the family.

In the statistics on household composition, families are always included in one of the three major groups of two-or-more-person households. Primary individuals with nonrelatives living with them are tabulated as "other male head" or "female head." Primary individuals living alone are always tabulated as "one-person households."

Subfamily.—A subfamily is a married couple with or without children, or one parent with one or more own single (never married) children under 18 years old, living in a household and related to, but not including the head of the household or his wife. The most common

APPENDIX A—Continued

example of a subfamily is a young married couple sharing the home of the husband's or wife's parents.

Age of head.—The age classification refers to the age reported for the head of the household as of his last birthday.

Persons 65 years old and over.—All persons, including the head, who are members of the household and are 65 years and over are included in the count of persons 65 years old and over.

Own children.—Statistics on presence of "own" children of household heads are shown in this report. A child under 18 years old is defined as an "own" child if he or she is a single (never married) son, daughter, stepchild, or adopted child of a household head. Own children of subfamilies are excluded from the total count of own children.

Nonrelative.—A nonrelative of the head is any person in the household who is not related to the head by blood, marriage, or adoption. Roomers, boarders, lodgers, partners, resident employees, wards, and foster children are included in this category.

Income.—The statistics on income in the Annual Housing Survey are based on the respondent's reply to questions on income for the 12 months prior to enumeration and is the sum of the amounts reported for wage and salary income, net self-employment income, Social Security or railroad retirement income, public assistance or welfare payments, and all other money income. The figures represent the amount of income received before deductions for personal income taxes, Social Security, union dues, bond purchases, health insurance premiums, Medicare deductions, etc.

In this report, the statistics relate to the money income of the family or primary individual occupying the housing unit, that is, the sum of the income of the

head of the family and all other members of the family 14 years old and over or the income of the primary individual. Incomes of persons living in the unit but not related to the head of the household are not included in this sum.

Wage or salary income is defined as the total money earnings received for work performed as an employee at any time during the 12-month period prior to enumeration. It includes wages, salary, piece rate payments, commissions, tips, cash bonuses, and Armed Forces pay. Net self-employment income is defined as net money income (gross receipts minus operating expenses) received from a business, professional practice, partnership, or farm in which the person was engaged on his own account.

Social Security or railroad retirement income includes cash receipts of Social Security pensions; survivors' benefits; disability insurance programs for retired persons, dependents of deceased insured workers, or disabled workers; and deductions for Medicare and health insurance premiums. Cash receipt of retirement, disability, and survivors' benefit payments made by the U.S. Government under the Railroad Retirement Act are also included. Separate payments received for hospital or other medical care are not included.

Income from all other sources includes money income received from sources such as periodic payments from estates and trust funds; dividends; interest; net rental income (or loss) from property rentals; net receipts from roomers or boarders; net royalties; public assistance or welfare payments which include cash receipts received from public assistance programs such as old age assistance, aid to families with dependent children, and aid to the blind or totally disabled; unemployment insurance benefits; money received for transportation and/or subsistence by persons participating in special governmental training programs such as the Area Redevelopment Act and the Man-

power Development and Training Act; workmen's compensation cash benefits; periodic payments by the Veterans Administration to disabled members of the Armed Forces or to survivors of deceased veterans; public or private pensions; periodic receipts from insurance policies or annuities; alimony or child support from persons who are not members of the household; net gambling gains; and nonservice scholarships and fellowships.

Receipts from the following sources were not included as income: Value of income "in kind" such as free living quarters, housing subsidies, food stamps, or food produced and consumed in the home; money received from the sale of property (Unless the recipient was engaged in the business of selling such property); money borrowed; tax refund; withdrawal of bank deposits; accrued interest on "uncashed" savings bonds; exchange of money between relatives living in the same household; and gifts and lump-sum insurance payments, inheritances, and other types of lump-sum receipts.

The income statistics and the characteristics of the household refer to different periods in time; the income data refer to the 12 months prior to enumeration whereas the household characteristics refer to the date of enumeration. Thus, the income of the family does not include amounts received by persons who were members of the family during all or part of the income period if these persons no longer resided with the family at the time of enumeration. On the other hand, family income includes amounts reported by related persons who did not reside with the family during the income period but who were members of the family at the time of enumeration. For most families, however, the income reported was received by persons who were members of the family throughout the income period.

APPENDIX A—Continued

FACSIMILE OF THE ANNUAL HOUSING SURVEY QUESTIONNAIRE: 1974 (Continued)

Section I - OCCUPIED UNITS (Include URE's)			
17. When did . . . (head) move into this house (apartment)?	After April 1, 1970 <input checked="" type="checkbox"/>		
	<input type="checkbox"/> March (0-12) Year		
	<input type="checkbox"/> 1965 to April 1, 1970 <input type="checkbox"/> 2 <input type="checkbox"/> 1960 to 1964 <input type="checkbox"/> 3 <input type="checkbox"/> 1950 to 1959 <input type="checkbox"/> 4 <input type="checkbox"/> 1949 or earlier		
18. In which county and State did . . . (head) live on April 1, 1970?	County	State	
		<input type="checkbox"/> OR <input type="checkbox"/> Outside the United States — Skip to 20	
19. Did . . . (head) live inside the limits of a city, town or village?	<input type="checkbox"/> 1 <input type="checkbox"/> Yes — Name of place <input type="text"/>		
	<input type="checkbox"/> 2 <input type="checkbox"/> No		
20. Was . . . (head) in the U.S. Armed Forces on April 1, 1970?	<input type="checkbox"/> 1 <input type="checkbox"/> Yes <input type="checkbox"/> 2 <input type="checkbox"/> No		
	<input type="checkbox"/> Mark all 3 parts (See Item 17) (1) Household head lived here last 90 days (2) Household head lived here last winter (3) Household head moved here during the last 12 months . . .		
21a. How many living quarters, both occupied and vacant, are there in this house (building)?	<input type="checkbox"/> 1 <input type="checkbox"/> Mobile home or trailer <input type="checkbox"/> 2 <input type="checkbox"/> One, detached from any other house <input type="checkbox"/> 3 <input type="checkbox"/> One, attached to one or more houses { Skip to 21d 4 <input type="checkbox"/> 2 5 <input type="checkbox"/> 3 or 4 6 <input type="checkbox"/> 5 to 9 7 <input type="checkbox"/> 10 to 19 8 <input type="checkbox"/> 20 to 49 9 <input type="checkbox"/> 50 or more		
b. Is your mobile home (trailer) anchored, that is, secured with tie-downs or by other means?	<input type="checkbox"/> 1 <input type="checkbox"/> Yes <input type="checkbox"/> 2 <input type="checkbox"/> No <input type="checkbox"/> 3 <input type="checkbox"/> Don't know		
OBSERVATION			
c. Is the mobile home in a group of 6 or more mobile homes?	<input type="checkbox"/> 1 <input type="checkbox"/> Yes <input type="checkbox"/> 2 <input type="checkbox"/> No		
OBSERVATION			
d. Is any part of this property used as a commercial establishment?	<input type="checkbox"/> 1 <input type="checkbox"/> Yes <input type="checkbox"/> 2 <input type="checkbox"/> No		
OBSERVATION			
e. Is any part of this property used as a medical or dental office?	<input type="checkbox"/> 1 <input type="checkbox"/> Yes <input type="checkbox"/> 2 <input type="checkbox"/> No		

Section I - OCCUPIED UNITS (Include URE's) - Continued			
22a. How many stories (floors) are in this house (building)? (Exclude basement)	<input type="checkbox"/> 1 <input type="checkbox"/> 1 to 3 — Skip to 23 <input type="checkbox"/> 2 <input type="checkbox"/> 4 to 6 <input type="checkbox"/> 3 <input type="checkbox"/> 7 to 12 <input type="checkbox"/> 4 <input type="checkbox"/> 13 or more		
OBSERVATION			
b. Is there a passenger elevator in this building?	<input type="checkbox"/> 1 <input type="checkbox"/> Yes <input type="checkbox"/> 2 <input type="checkbox"/> No		
23. How many rooms do you have in your house (apartment)? Do not count bathrooms, porches, balconies, foyers, halls, or half-rooms.	<input type="checkbox"/> 1 <input type="checkbox"/> Yes <input type="checkbox"/> 2 <input type="checkbox"/> No		
24. Does each room in your house (apartment) have a working electric wall outlet (wall plug)?	<input type="checkbox"/> 1 <input type="checkbox"/> Yes <input type="checkbox"/> 2 <input type="checkbox"/> No		
25. How many bedrooms do you have in your house (apartment)? Count rooms used mainly for sleeping even if used for other purposes.	<input type="checkbox"/> 1 <input type="checkbox"/> Yes <input type="checkbox"/> 2 <input type="checkbox"/> No		
26a. Is it necessary to pass through anyone's bedroom to get from one room to another — excluding bathrooms?	<input type="checkbox"/> 1 <input type="checkbox"/> Yes — Skip to Check Item B <input type="checkbox"/> 2 <input type="checkbox"/> No		
b. Is it necessary to pass through anyone's bedroom to get to the bathroom?	<input type="checkbox"/> 1 <input type="checkbox"/> Yes <input type="checkbox"/> 2 <input type="checkbox"/> No		
CHECK ITEM B	<input type="checkbox"/> (See cc 15g) Do not count persons with usual residence elsewhere unless entire household is URE. <input type="checkbox"/> Household has 1 or 2 persons — Skip to 28 <input type="checkbox"/> Household has 3 or more persons — Ask 27a		
27a. Are any bedrooms used for sleeping by 3 or more persons?	<input type="checkbox"/> 1 <input type="checkbox"/> Yes <input type="checkbox"/> 2 <input type="checkbox"/> No		
	<input type="checkbox"/> Yes — How many bedrooms are used for sleeping by 3 or more persons? <input type="checkbox"/> 1 <input type="checkbox"/> 1 bedroom <input type="checkbox"/> 2 <input type="checkbox"/> 2 or more bedrooms <input type="checkbox"/> 3 <input type="checkbox"/> No — Skip to 28		
b. Are any of the persons who use this bedroom (these bedrooms) 13 years of age or older?	<input type="checkbox"/> 1 <input type="checkbox"/> Yes <input type="checkbox"/> 2 <input type="checkbox"/> No		
28. Do you have complete kitchen facilities in this house (building); that is, a kitchen sink with piped water, a refrigerator and a range or a cookstove?	<input type="checkbox"/> 1 <input type="checkbox"/> Yes — Exclusive use <input type="checkbox"/> 2 <input type="checkbox"/> Yes — Also used by another household <input type="checkbox"/> 3 <input type="checkbox"/> No — Skip to 30		
29a. Are the kitchen sink, refrigerator, and range or cookstove all in usable condition?	<input type="checkbox"/> 1 <input type="checkbox"/> Yes — Skip to 30 <input type="checkbox"/> 2 <input type="checkbox"/> No		
b. Which of the items are not in usable condition? (Mark all that apply)	<input type="checkbox"/> 1 <input type="checkbox"/> Kitchen sink <input type="checkbox"/> * 2 <input type="checkbox"/> Refrigerator <input type="checkbox"/> 3 <input type="checkbox"/> Range or cookstove		
30. Which fuel is used most for cooking?	<input type="checkbox"/> Gas — <input type="checkbox"/> 1 <input type="checkbox"/> From underground pipes serving the neighborhood <input type="checkbox"/> 2 <input type="checkbox"/> Bottled, tank or LP <input type="checkbox"/> 3 <input type="checkbox"/> Electricity <input type="checkbox"/> 4 <input type="checkbox"/> Fuel oil, kerosene, etc. <input type="checkbox"/> 5 <input type="checkbox"/> Coal or coke <input type="checkbox"/> 6 <input type="checkbox"/> Wood <input type="checkbox"/> 7 <input type="checkbox"/> Other fuel <input type="checkbox"/> 8 <input type="checkbox"/> No fuel used

SAMPLE DESIGN

The estimates are based on data collected in August through October 1974 for the Annual Housing Survey (AHS), which was conducted by the Bureau of the Census, acting as collection agent for the Department of Housing and Urban Development. The sample for this survey was spread over 461 sample areas (called primary sampling units), comprising 923 counties and independent cities with coverage in each of the 50 States and the District of Columbia.

Approximately 71,300 sample housing units (both occupied and vacant) were eligible for interview in the 1974 AHS. Of this number, 2,200 interviews were not obtained because, for occupied housing units, the occupants were not found at home after repeated calls or were unavailable for some other reason, or, for vacant housing units, no informed respondent could be found after repeated visits. In addition to the 71,300, there were also 7,000 sample units which were visited but

found not to provide information relevant to the 1974 housing inventory.

Selection of sample areas.—The United States was divided into areas made up of counties and independent cities referred to as primary sampling units (PSU's). Then the PSU's were grouped into 376 strata, 156 of which consisted of only one PSU which was in sample with certainty. These 156 strata were mostly the larger SMSA's and were called self-representing (SR) since the sample from the sample area represented just that PSU. Each one of the other 220 strata consisted of a group of PSU's and were referred to as non-self-representing (NSR), since the sample of housing units from the sample PSU in a stratum represented the other PSU's in the stratum as well.

One PSU was selected from each NSR stratum with probability proportionate to the 1970 census population of the PSU. (This resulted in 220 NSR sample PSU's.) In addition, the NSR strata were grouped into 110 pairs and one stratum was picked at random from each pair. From this stratum, an additional PSU was selected independent of the other PSU selected from this stratum. Since the two PSU's were independently selected, it was possible for the same PSU to be selected twice. This occurred in 25 instances, producing an additional 85 NSR sample PSU's.

Designation of sample housing units for the 1974 enumeration.—The sample housing units designated to be interviewed in the 1974 enumeration consisted of the following categories, which are described in detail in succeeding sections.

1. All sample housing units that were interviewed in the 1973 enumeration.
2. All 1973 sample housing units that were either Type A noninterviews, i.e., units eligible to be interviewed, or Type B noninterviews, i.e., units not eligible for interview at the time of enumeration but which could become

eligible in the future. (For a list of the Type A and Type B noninterviews, see facsimile of 1974 AHS questionnaire, page 1.)

3. All sample housing units that were selected in the 1974 rural supplementation.

4. All sample housing units that were selected from the list of building permits issued since the 1973 enumeration. (This sample represents the housing units built since the 1973 enumeration.)

Selection of the 1973 sample housing units.—The overall sampling rate used to select the sample for the 1973 AHS was about 1 in 1,366. The within-PSU sampling rate for AHS was determined so that the overall probability of selection for each sample housing unit was the same (e.g., if the probability of selecting a NSR PSU was 1 in 10, then the within-PSU sampling rate would be 1 in 136.6).

Within the sample PSU's, a sample of the housing units enumerated in the 1970 Census of Population and Housing was selected for AHS. In addition, a sample of new construction building permits was also selected to represent the units constructed since the 1970 census. These samples were selected at about twice the rate mentioned previously (i.e., at 2 in 1,366), thereby producing a sample twice as large as needed. This sample was split into two equal-sized samples—one to be used for AHS and one to be held in reserve for possible future use for AHS. The procedure used to split this sample into half-samples is described in the next section.

The sample of 1970 census units was selected in several stages of sampling. The first step was the selection of a sample of census enumeration districts (ED's), administrative units used in the 1970 census. The probability of selection for an ED was proportionate to its 1970 population. The next step was to select a cluster of about four neighboring housing

units within each sample ED. For most of the ED's, the selection was accomplished using the list of addresses for the ED as compiled in the 1970 census. However, in those ED's where addresses were incomplete or inadequate (mostly rural areas), the selection process was accomplished using area sampling methods. These ED's were divided into segments, i.e., small land areas with well-defined boundaries, having an expected size of four, or a multiple of four, housing units. Those segments with an expected size which was a multiple of four were further subdivided into areas with an expected size of four housing units.

The sample of new construction units was selected from building permits issued since January 1970. Within each sample PSU, the building permits were chronologically ordered by month issued, and compact clusters of approximately four housing units were created. These clusters were then sampled for inclusion in the AHS at the sampling rate of 2 in 1,366. As a result of the area sampling methods described above, housing units constructed since the 1970 census in areas which do not issue building permits were brought into the sample.

Splitting of the sample.—The sample selection procedure as described above produced segments of size-four housing units for the sample taken from the census address frame, the new construction frame, and the area sampling frame (mainly rural areas). One can expect a minimum loss in precision for segments of size-four housing units in rural areas because of the heterogeneity of this type of housing unit. Segments of size two, however, were considered to be more optimal for sampling within those areas where one could expect neighboring units to be very similar (e.g., urban areas and new construction units). It is felt that if one were to go to segments of size-four housing units in this type of area, a significant loss in precision would result. A splitting operation was then carried out for segments selected from the census address and new construction frames. This consisted of halving each segment of

four housing units that was selected for the sample. Two housing units from each segment were to be included in the survey and two were to be held in reserve. No splitting operation was carried out within the segments selected from the area sampling frame; every other area sample segment of four housing units was used for the survey and the remaining segments were assigned to the reserve sample.

Selection of supplemental sample housing units in rural areas.—In 1974, it was decided to increase the reliability of the AHS estimates of rural housing characteristics, by doubling the number of sample housing units from rural areas. This was accomplished by reactivating the reserve sample, selected in the original sampling operations in 1973, from rural areas only. For the reserve sample selected in census address and new construction segments, this meant that the other half of the segment (an expected two housing units) was reactivated in 1974 if the segment was rural. Similarly for area segments, this meant the entire reserve segment (an expected four housing units) was reactivated in 1974 if the segment was rural. This supplementation increased the overall probability of selection for sample housing units in rural areas to about 2 in 1,366; whereas, the overall probability of selection for sample housing units in urban areas remained at 1 in 1,366.

ESTIMATION

The 1974 AHS estimates employed a three-stage ratio estimation procedure. However, prior to implementation of the procedure, the basic weight (i.e., the inverse of the probability of selection) was adjusted to account for the Type A noninterview housing units encountered in the AHS. This noninterview adjustment was done separately for occupied and vacant units. The noninterview adjustment was equal to the following ratio:

$$\frac{\text{Interviewed housing units} + \text{noninterviewed housing units}}{\text{Interviewed housing units}}$$

The first-stage ratio estimation procedure was employed for sample housing

units from non-self-representing (NSR) PSU's only. The procedure was designed to reduce the contribution to the variance arising from the sampling of PSU's. The first-stage ratio estimation procedure takes into account the differences that existed at the time of the 1970 census in the distribution by tenure and residence of the housing population estimated from the sample NSR PSU's and that of the NSR housing population in each of the four census regions of the country.

The first-stage ratio estimation factor for each specified category was as follows:

The 1970 census housing population in the residence-tenure category for all NSR strata in a census region

Estimate of the housing population category using 1970 census housing counts for sample NSR PSU's in a census region

The numerators of the ratios were calculated by obtaining the 1970 census housing counts for each of the residence-tenure categories for each NSR stratum and summing these counts across the NSR strata in each census region. The denominators were calculated by obtaining the 1970 census housing counts for each of the residence-tenure categories for each NSR sample PSU, weighting these counts by the inverse of the probability of selecting that PSU, and summing these weighted counts across the NSR PSU's in each census region.

The computed first-stage ratio estimation factor was then applied to the existing weight for each NSR sample unit in each first-stage ratio estimation category.

The second-stage ratio estimation procedure was only employed for AHS new construction sample units (i.e., sample units built April 1, 1970, or later). This procedure was designed to adjust the AHS sample estimates of new construction units to independently derived current estimates for six categories of new construction units (i.e., four categories for conventional new construction units and two for new construction mobile homes). This adjustment was necessary so

APPENDIX B—Continued

as to correct for known deficiencies in the AHS sample with regard to representation of new construction units (see the section on non-sampling error).

The second-stage ratio estimate factor for each specified category was as follows:

Current independent estimate of new construction units in the category

AHS sample estimate of new construction units in the category

The numerators of the ratios for conventional new construction were derived from data based on the Survey of Construction (SOC), a survey of building permits conducted monthly by the Bureau of the Census. The numerators of the ratios for new construction mobile homes were derived from estimates of mobile home shipments adjusted to account for mobile homes shipped and actually occupied as primary residences.

The denominators of the ratios were obtained from the weighted estimates for the AHS sample units, using the existing weight after the first-stage ratio estimation procedure (i.e., the estimates employing the noninterview and first-stage adjustments).

The computed second-stage ratio estimation factor was then applied to the existing weight for each sample unit in each second-stage ratio estimation category.

The third-stage ratio estimation procedure was employed for all AHS sample units. This procedure was designed to adjust the AHS sample estimates of housing (i.e., the estimates employing the non-interview, first-stage, and second-stage adjustments) to independently derived current housing estimates for 4 types of vacant housing units and for 24 residence-tenure-race of head-sex of head categories for occupied housing units.

The third-stage ratio estimate factor for each specified category was as follows:

Current independent estimate of housing units in the category

AHS sample estimate of housing units in the category

The numerators of the ratios for occupied housing units were derived from data based on the Current Population Survey (CPS), a household survey conducted monthly by the Bureau of the Census. The numerators of the ratios for vacant housing units were derived from data based on the Housing Vacancy Survey (HVS), a quarterly vacancy survey conducted by the Bureau of the Census.

The denominators of the ratios were obtained from the weighted estimates for the AHS sample units, using the existing weight after the second-stage ratio estimation procedure.

The computed third-stage ratio estimate factor was then applied to the existing weight for each sample unit in each third-stage ratio estimation category.

The second- and third-stage ratio estimation procedures were repeated in an iterative process in order to bring the AHS estimates into close agreement with both sets of independent estimates (i.e., the independent estimates employed for the second-stage ratio estimation process as well as those employed for the third-stage ratio estimation process). The factors resulting from this iterative process were then applied to the existing weight on the appropriate records, and the resulting product was used as the final weight for tabulation.

The effect of the third-stage ratio estimation procedure, as well as the overall estimation procedure, was to reduce the sampling error for most statistics below what would have been obtained by simply weighting the results of the sample by the inverse of the probability of selection. The distribution of the housing population selected for the sample differed somewhat, by chance, from that of the nation as a whole in such basic housing characteristics as tenure, vacancy status, residence, race of head, and sex of head. These characteristics are probably closely correlated with other housing characteristics measured for AHS. Therefore, through the use of the three-stage ratio estimation procedure, one can expect the sample estimate to be improved substantially when the sample housing population is brought into close agreement with

a known distribution of the entire housing population with respect to these basic housing characteristics.

RELIABILITY OF THE ESTIMATES

There are two types of possible errors associated with estimates based on data from sample surveys: Sampling and non-sampling errors. The following is a description of the sampling and nonsampling errors associated with the AHS National sample.

Sampling errors.—The particular sample used for this survey is one of a large number of possible samples of the same size that could have been selected using the same sample design. Even if the same schedules, instructions, and enumerators were used, estimates from each of the different samples would differ from each other. The deviation of a sample estimate from the average of all possible samples is defined as the sampling error. The standard error of a survey estimate attempts to measure this variation among the estimates from the possible samples and thus is a measure of the precision with which an estimate from a sample approximates the average result of all possible samples.

As calculated for this report, the standard error also partially measures the variation in the estimates due to response and enumerator errors (nonsampling errors), but it does not measure, as such, any systematic biases in the data. Therefore, the accuracy of the estimates depends on both the sampling and nonsampling errors measured by the standard error and biases and some additional non-sampling errors not measured by the standard error.

The sample estimate and its estimated standard error enable one to construct interval estimates such that the interval includes the average result of all possible samples with a known probability. For example, if all possible samples were selected, each of these surveyed under essentially the same general conditions, and an estimate and its estimated standard error were calculated from each sample, then:

APPENDIX B--Continued

1. Approximately 68 percent of the intervals from one standard error below the estimate to one standard error above the estimate would include the average result of all possible samples.

2. Approximately 90 percent of the intervals from 1.6 standard errors below the estimate to 1.6 standard errors above the estimate would include the average result of all possible samples.

3. Approximately 95 percent of the intervals from two standard errors below the estimate to two standard errors above the estimate would include the average result of all possible samples.

The average result of all possible samples may or may not be contained in any particular computed interval. However, for a particular sample one can say with specified confidence that the average result of all possible samples is included in the constructed interval.

The figures presented in the tables below are approximations to the standard errors of various estimates shown in this report. In order to derive standard errors that would be applicable to a wide variety of items and also could be prepared at a moderate cost, a number of approximations were required. As a result, the tables of standard errors provide an indication of the order of magnitude of the standard errors rather than the precise standard error for any specific item.

Tables I and II present the standard errors applicable to housing unit estimates in this report. Table I shows the approximate standard errors applicable to all housing unit estimates except those pertaining to the specified items in the table. The standard errors shown in table II should be used for those specified items. Linear interpolation should be used to determine standard errors for estimates not specifically shown in tables I and II.

TABLE II. Standard Errors of Estimated Numbers of Housing Units Pertaining to Cooking Fuel, Households Lacking Complete Plumbing Facilities, Mobile Homes, Sewage Disposal, Source of Water, and Households With Head of Spanish Origin: 1974

75,000	75,000	71

The reliability of an estimated percentage depends upon the size of the percentage and the size of the total upon which the percentage is based. Estimated percentages are relatively more reliable than the corresponding estimates of the numerators of the percentages, particularly if the percentages are 50 percent or more.

Tables III and IV present the standard errors of estimated percentages. Table III shows the approximate standard errors of all estimated percentages of housing units except those pertaining to the specified items in table II. The standard errors shown in table IV should be used for those specified items. Two-way linear interpolation should be used to determine standard errors for estimated percentages not specifically shown in tables III and IV.

For ratios, where x is not a subclass of y, the following tables; i.e., tables III and IV, underestimate the standard error of the ratio when there is little or no correlation between x and y. For this type of ratio, a better approximation of the standard error may be obtained by letting the standard error of the ratio be approximately equal to:

$$(100) (x/y) \sqrt{\left(\frac{\sigma_x}{x}\right)^2 + \left(\frac{\sigma_y}{y}\right)^2}$$

Let x = the numerator

y = the denominator

σ_x = the standard error of the numerator

σ_y = the standard error of the denominator

*Illustrations of the use of the standard error tables:—Illustration 1.—*Table A-1 of this report shows that in the United States there were 4,482,000 owner-occupied housing units occupied by recent movers in 1974. Interpolation in table I of this appendix shows the standard error on an estimate of this size is approximately 77,000. Consequently, the 68-percent confidence interval, as shown by these data, is from 4,405,000 to 4,559,000 housing units. Therefore, a conclusion that the average estimate,

500	0.5	0.8	1.2	1.6	1.9	2.3	2.7
1,000	0.4	0.5	0.8	1.1	1.3	1.6	1.9
2,500	0.2	0.3	0.5	0.7	0.8	1.0	1.2
5,000	0.2	0.2	0.4	0.5	0.6	0.7	0.8
10,000	0.1	0.2	0.3	0.4	0.4	0.5	0.6
25,000	0.1	0.1	0.2	0.2	0.3	0.3	0.4
50,000	0.1	0.1	0.1	0.2	0.2	0.3	0.3
75,000	0.0	0.1	0.1	0.1	0.2	0.2	0.2

derived from all possible samples, of 1974 housing units of this type lies within a range computed in this way would be correct for roughly 68 percent of all possible samples. Similarly, we could conclude that the average estimate, derived from all possible samples, lies within the interval from 4,359,000 to 4,605,000 housing units with 90 percent confidence and that the average estimate lies within the interval from 4,328,000 to 4,636,000 housing units with 95 percent confidence.

Table A-1 also shows that of the 4,482,000 1974 owner-occupied housing units occupied by recent movers in the United States, 366,000 or 8.2 percent had six persons or more. Interpolation in table III (i.e., interpolation on both the base and percent) of this appendix shows that the standard error of the above percentage is approximately .5 percentage points. Consequently, the 68-percent confidence interval, as shown by these data, is from 7.7 to 8.7 percent; the 90-percent confidence interval is from 7.4 to 9.0 percent; and the 95-percent confidence interval is from 7.2 to 9.2 percent.

2,500	0.3	0.4	0.6	0.8	1.0	1.2	1.4
5,000	0.2	0.3	0.4	0.6	0.7	0.9	1.0
10,000	0.1	0.2	0.3	0.4	0.5	0.6	0.7
25,000	0.1	0.1	0.2	0.3	0.3	0.3	0.4
50,000	0.1	0.1	0.1	0.2	0.2	0.2	0.3
75,000	0.1	0.1	0.1	0.2	0.2	0.2	0.3

Illustration 2.—Table A-19 shows that in the Nation there were 125,000 owner-occupied housing units occupied by Spanish recent movers. Table II above shows that the standard error of an estimate of this size is approximately 15,000 (table II should be used since this estimate pertains to households with Spanish head). Consequently, we could conclude with 68 percent confidence that the average estimate of 1974 homeowner units occupied by Spanish recent movers lies within the interval from 110,000 to 140,000 housing units. Similarly, the 90-percent confidence interval is from 101,000 to 149,000 housing units; and the 95-percent confidence interval is from 95,000 to 155,000 housing units.

Table A-19 also shows that of the 125,000 homeowner units occupied by Spanish recent movers 38,000 or 30.4 percent had two bedrooms. Interpolation in table IV (i.e., interpolation on both the base and percent) of this appendix shows that the standard error of the above percentage is approximately 5.9 percentage points. Consequently, the 68-percent con-

fidence interval, as shown by this data, is from 24.5 to 36.3 percent; the 90-percent confidence interval is from 21.0 to 39.8 percent; and the 95-percent confidence interval is from 18.6 to 42.2 percent.

Differences.—The standard errors shown are not directly applicable to differences between two sample estimates. The standard error of a difference between estimates is approximately equal to the square root of the sum of the squares of the standard errors of each estimate considered separately. This formula is quite accurate for the difference between estimates of the same characteristic in two different areas or the difference between separate and uncorrelated characteristics in the same area. If, however, there is a high positive correlation between the two characteristics, the formula will overestimate the true standard error.

Illustration of the computation of the standard error of a difference.—Table A-1 of this report also shows that in the United States there were 457,000 owner-

occupied housing units occupied by recent movers with five persons in 1974. Thus, the apparent difference between the number of owner-occupied housing units occupied by recent movers with five persons and the number with six persons or more is 91,000. Table I shows that the standard error on an estimate of 366,000 to be approximately 23,000 and that the standard error on an estimate of 457,000 to be approximately 26,000. Therefore, the standard error of the estimated difference of 91,000 is about

$$35,000 = \sqrt{(23,000)^2 + (26,000)^2}$$

Consequently, the 68-percent confidence interval for the 91,000 difference is from 56,000 to 126,000 housing units. Therefore, a conclusion that the average estimate of this difference, derived from all possible samples, lies within a range computed in this way would be correct for roughly 68 percent of all possible samples. Similarly, the 90-percent confidence interval is from 35,000 to 147,000 housing units and the 95-percent confidence interval is from 21,000 to 161,000 housing units. Thus we can conclude with 95 percent confidence that the number of owner-occupied housing units occupied by recent movers with five persons is greater than the number with six or more persons in the United States in 1974.

Medians.—For the medians presented in certain tables, the sampling error depends on the size of the base and on the distribution upon which the median is based. An approximate method for measuring the reliability of the estimated median is to determine an interval about the estimated median such that there is a stated degree of confidence that the average median from all possible samples lies within the interval. The following procedure may be used to estimate confidence limits of a median based on sample data:

- From the tables I, II, III, and IV, in conjunction with the formula for the standard error of a percentage, determine the standard error of a 50-percent characteristic on the base of the median;

- Add to and subtract from 50 percent the standard error determined in step 1; and
- Using the distribution of the characteristic, read off the confidence interval corresponding to the two points established in step 2.

For about 68 out of 100 possible samples, the average median from all possible samples would lie between these two values.

A two-standard-error confidence interval may be determined by finding the values corresponding to 50 percent plus and minus twice the standard error determined in step 1. For about 95 out of 100 possible samples, the average median from all possible samples would lie between these two values.

Illustration of the computation of the standard error of a median.—Table A-1 of this report shows that the median number of persons in owner-occupied housing units occupied by recent movers in the United States was 3.0 in 1974. The base of the distribution, from which this median was determined, is 4,482,000 housing units.

1. Table III shows that the standard error of 50 percent on a base of 4,482,000 is .9.

2. To obtain a two-standard error confidence interval on the estimated median, add to and subtract from 50 percent twice the standard error determined in step 1. This yields percentage limits of 48.2 and 51.8.

3. From table A-1, it can be seen by cumulating the frequencies for the first two categories that 1,721,000 owner-occupied housing units occupied by recent movers, or 38.4 percent, had one and two persons (actually, the category of two persons is considered to be from 1.5 to 2.5 persons) and that an additional 960,000 housing units, or 21.4 percent, had three persons (i.e., 2.5 to 3.5 persons). By linear interpolation, the lower limit of the 95-percent confidence interval is found to be about

$$2.5 + (3.5 - 2.5) \left(\frac{48.2 + 38.4}{21.4} \right) = 3.0$$

Similarly, the upper limit of the 95-percent confidence interval is found to be about

$$2.5 + (3.5 - 2.5) \left(\frac{51.8 + 38.4}{21.4} \right) = 3.1$$

Thus, the 95-percent confidence interval ranges from 3.0 to 3.1 persons. Although it appears that this confidence interval has the sample estimate as the lower limit, it actually is a reflection of the rounding error associated with the median (see the paragraph on rounding error in the nonsampling error section).

Nonsampling errors.—In general, nonsampling errors can be attributed to many sources: Inability to obtain information about all cases, definitional difficulties, differences in the interpretation of questions, inability or unwillingness to provide correct information on the part of respondents, mistakes in recording or coding the data, and other errors of collection, response, processing, coverage, and estimation for missing data. As can be seen from the above list, nonsampling errors are not unique to sample surveys since they can, and do, occur in complete censuses as well.

Obtaining a measurement of the total nonsampling error associated with the estimates from a survey is very difficult, considering the number of possible sources of error. However, for the 1974 AHS-National sample, a study was conducted to obtain a measurement of some of the nonsampling errors associated with the AHS estimates. A reinterview program was conducted for a sample of the AHS households. These households were revisited and answers to some of the questions on the AHS questionnaire were obtained again. The two observations (i.e., the original interview and the reinterview) were assumed to be two independent readings and thus were the basis for the measurement of the accuracy of the AHS estimates.

APPENDIX B—Continued

As part of the reinterview, a check was made at each of these households to determine if the following was done during the original interview:

1. The correct unit was visited
2. The correct number of housing units was interviewed at that address.
3. The correct information on "Year Built" was obtained.
4. The correct information on "Tenure" was obtained.
5. The correct information on "Household Composition" was obtained.
6. The correct information on "Type of Housing Unit" was obtained.
7. The correct information on "Occupancy Status" was obtained.

This check was for interviewer evaluation and control.

The results of the reinterview study are presented in the Census Bureau memorandum, "Reinterview Results for the Annual Housing Survey—National Sample: 1974." Twenty-five items were included in the reinterview, some for the first time. The estimated indexes of inconsistency of these items ranged from 4 to 35 with most items in the 20 to 30 range. (A 20-50 interval is considered moderate on a range of 0-100 with a high index associated with a high level of response variability.) The items with the higher levels of inconsistency tended to be the attitude and opinion items which were expected to have higher inconsistency levels.

The 1970 census reinterview results provided illustrations of possible nonsam-

pling errors for some of the items which also appear in the AHS. For example, median value of homes was consistently underestimated by about 5 percent, and the average monthly costs of electricity and utility gas were consistently overestimated although the effect on the average gross rent figures was fairly small.

A possible explanation for the results of the AHS and census reinterview studies, as well as the surveys themselves, is that the data are based on the answers given by the respondents, who may lack precise information. Also, the results of the reinterview studies are derived from sample surveys so there is sampling error associated with these estimates of non-sampling error.

With respect to errors of coverage and estimation for missing data, it was mentioned previously in the section on estimation that the AHS new construction sample had deficiencies with regard to the representation of both conventional new construction in permit-issuing areas and new construction mobile homes. During the sampling of building permits, only those issued January 1, 1970, or later were eligible to be sampled to represent conventional new construction in permit-issuing areas. It had been assumed that units with permits issued prior to 1970 would have been completed by the time of the 1970 census (i.e., April, 1970) and therefore would have been represented in the sample selected from 1970 census units. However, it has been estimated that the 1974 AHS sample missed about 7 percent (i.e., about 600,000 units) of all conventional new construction (i.e., in both permit-issuing and non-permit-issuing

areas) because the permits for these units, which were built after April 1970, were issued before 1970. In addition, unlike the procedure for conventional new construction, there is no sampling procedure specifically for new construction mobile homes. New mobile homes in area segments, however, do come into the AHS sample. In addition, new mobile homes in address segments also come into sample if the mobile homes are located in mobile home parks, identified as such in the 1970 census. However, new mobile homes in address segments that are located in mobile home parks, not in existence at the time of the 1970 census or not identified as such in the 1970 census, have no chance of coming into the AHS sample. It has been estimated that the 1974 AHS sample missed about one-fourth of all new mobile homes (i.e., about 400,000 units). The second-stage ratio estimation procedure was employed to reduce the effect of both these deficiencies, although some bias in the AHS sample still exists.

With respect to errors associated with processing, the rounding of estimates introduces another source of error in the data, the severity of which depends on the statistic being measured. The effect of rounding is significant relative to the sampling error only for small percentages, median number of persons, and median number of rooms when these figures are derived from relatively large bases. This means that confidence intervals formed from the standard errors given may be distorted, and this should be taken into account when considering the results of the survey.

Announcing a new series

New Residential Construction in Selected Standard Metropolitan Statistical Areas

Series C21

Builders, urban planners, economists, bankers, and state and local government officials are interested in new private residential construction in metropolitan areas.

The following standard metropolitan statistical areas are shown in this new series . . .

Baltimore, Maryland
Chicago, Illinois
Cincinnati, Ohio-Kentucky-Indiana
Denver-Boulder, Colorado
Detroit, Michigan
Los Angeles-Long Beach, California
Miami, Florida
New York, New York-New Jersey
Phoenix, Arizona
Riverside, San Bernardino, California
San Jose, California

Seattle-Everett, Washington
Washington, D.C.-Maryland-Virginia

For these SMSA's quarterly data are provided on the number of housing units . . .

Authorized, by building permit
Started
Completed
Under construction
Authorized, but not yet started

U.S. Department of Commerce
BUREAU OF THE CENSUS
